

Office 365 Management

A single platform for total visibility and control.

Office 365 management platform

Nova is a platform of integrated services for Office 365 management. Whether you have one tenant or thousands, Nova enables you to gain deeper operational control and visibility of your environment, while removing a significant load from IT through sophisticated automation, delegation, and policy control in one interface.

Actionable visibility at every level to deliver full control and platform stability

By integrating five crucial management areas into one platform, Nova transforms insights into action with the click of a button.

Reporting and analytics

Detailed Office 365 analytics for monitoring service adoption, license management, mail flow, security settings, permissions, storage optimization, and so much more.

Adoption

Build a tailored adoption campaign with Adoption Accelerator. Detailed usage insights enable you to identify and target those who need help.

Security, auditing and compliance

Protect your Office 365 environment with powerful auditing and on-event alerting: prevent, detect and investigate threats, and achieve GDPR compliance.

Delegation and policy control

Granular role-based access control and delegated rights, with preconfigured and custom management actions.

Service monitoring

Office 365 workload availability monitoring, using robots deployed on-premises to assess user experience and pinpoint issues.

Cloud Migration

Powerful tenant migration solution offering industry-leading speeds for migrating, relocating, or consolidating Office 365 tenants.

What does this mean?

For Admins...

Users complaining that their email isn't working?

Identify whether it's an issue at user, tenant, region or Office 365 level with service monitoring. If it's an issue within the tenant, use reporting to drill down into mail traffic performance organization-wide to further isolate the scope of the issue that needs addressing.

Users unable to access their departmental Team in Microsoft Teams?

Check their permissions with detailed reporting and identify the issue. Rather than firing up PowerShell, correct their access using delegation and policy control in the same interface quickly and efficiently.

For Finance...

Need to know whether you need the top tier licenses you're paying for?

Find out with licence reporting. Get a full usage breakdown for all licence types in your organization, identify low usage, reallocate licensing with delegation and policy control, and avoid unnecessary spend.

For IT Security Managers...

One of your users has lost their mobile device containing company data. What do you do?

First, wipe the mobile device remotely and secure the user's account. Review the audit logs to ensure there has been no unsanctioned activity on the user's account. After the incident is resolved, IT Security Managers can also take preventative measures such as enabling MFA, all without the need for excessive rights in the tenant.

For Helpdesk...

Tickets piling up for simple Office 365 administrative tasks?

Empower Helpdesk to act quickly and efficiently on routine tasks for faster time to resolution. Simple tasks can be automated or completed in bulk, like resetting user passwords, updating user details, modifying licensing.

Take the next step towards advanced SaaS Management

Contact us to find out how Nova can streamline operations, deliver full control of your environment, and empower your IT teams to work on processes, rather than getting tied up in them.
